

DESIGN PHILOSOPHY

Our design philosophy is based on the creation of architecture elements that respond to a problem and satisfy a need.

With the client's collaboration, we are able to create solutions to meet the challenges of the specific project.

This collaborative process occurs through education, communication and innovation.

At **KVS Design** we strive to share knowledge of sustainable design with our clients, which provides them with an educated choice when it comes to environmentally friendly materials, products and processes.

We view **KVS Design** as a platform of information and discovery where the client and the designer meet to create and develop a design solution tailored to the client's needs, lifestyles and budget.

KVS DESIGN

Environmental/ energy conscious architectural design for residential additions, renovations & new construction.
